(303) 647-1411

### **Copernicus2 (1996 - Present)**

Jen is a Co-Founder and Owner of [Copernicus2](#), a patented system of global networking architectures operating at the core of today's Web3. (US Pat. No. 6,324,586)

Copernicus2 provided the blueprint used in rebuilding the critical infrastructures of the global internet beginning in 2007 in response to the "[Clean Slate](#)" initiatives of the mid 2000's.

The Copernicus2 architecture radically increased the speed and capacity of the global internet by removing the embedded timing layers, instead utilizing the timing signals from atomic clocks on GPS Satellites to directly synchronize the flow of data across the web.

As a result, large swaths of the internet began to operate in near real time, providing a new, more robust, more resilient, and more secure foundational infrastructure for global online transaction processing and the development of a new generation of technologies and industries.

This global-scale "virtual mainframe" enabled the distributed computing and massively parallel processing underlying today's large-scale neural networks, advanced machine learning, artificial intelligence and other Web3 advancements.

Throughout her Copernicus2 venture Jen worked closely with engineers as well as dozens of patent lawyers and IP attorneys, gaining attorney-level expertise in the areas of intellectual property law, technical and prior art research, claim/claim chart construction and identification of potentially infringing technologies, including a decade of direct courtroom experience successfully writing and winning motions.

## **Denver IT and Denver Geeks (2001 - Present)**

Jen has owned and operated the Denver Geeks and Denver IT since 2001. A 59-year old self-employed IT and tech support professional, Jen has over 30 years of deep and broad working experience in all areas and levels of IT.

Technology learning and problem solving is Jen's passion, and she gets the job done thoroughly and efficiently. Jen leads with an emphasis on educating and mentoring those around her to become ever more capable and confident with all of the technology that they touch.

Through her company, [The Denver Geeks](#), Jen serves seniors and residential clients, helping them to feel more confident and empowered with their technology. In her uniquely personable and patient style, Jen explains and demonstrates technical things plainly and simply, meeting her clients at their level of understanding.

Through her other company, [Denver IT](#), Jen provides full service IT consulting, tech support, computer repair, and web development to entrepreneurs and small businesses. An insatiable technology learner, Jen's 30 years of acquired knowledge and working experience, in combination with her tenacity and efficiency in technology problem solving, make Jen a rare and indispensable resource for her professional clients. ([22-year BBB A+ Rating](#).)

## **Colorado Entertainment Agency (1988-2001)**

A Julliard-trained classical violinist, Jen's professional music ensemble-booking business evolved into Colorado's largest full-service talent agency representing more than 4,700 entertainers of all types.

[Colorado Entertainment](#) hired, managed, produced and contracted entertainment for thousands of corporate, public and private special events throughout Colorado and nationally.
